Language And The Cognitive Construal Of The World

Language And The Cognitive Construal
Cognitive linguistics (CL) is an interdisciplinary branch of linguistics, combining knowledge and research from both psychology and linguistics. It describes how language interacts with cognition, how language forms our thoughts, and the evolution of language parallel with the change in the common mindset across time.

Our paper, written together by myself and Marcin Miłkowski, entitled Cognitive artifacts for geometric reasoning was published in Foundations of Science a few days ago (online first, open access). In our joint paper, we claim that explanations of geometric cognition should go beyond methodological individualism and take into account the role of distributed cognitive factors in the shaping of ...

Construal level theory (CLT) is a theory in social psychology that describes the relation between psychological distance and the extent to which people's thinking (e.g., about objects and events) is abstract or concrete. The general idea is that the more distant an object is from the individual, the more abstract it will be thought of, while the closer the object is, the more concretely it ...

SOCIAL COGNITIVE THEORY OF PERSONALITY
1. Introduction. Sarcasm is the lowest form of wit but the highest form of intelligence - Oscar Wilde. Experts on interpersonal interactions, group dynamics, and organizational effectiveness often instruct people to avoid sarcasm, which are expressions intended to humorously communicate one’s meaning through language that signifies the opposite (Gibbs, 1986, Pexman and Olineck, 2002).

The highest form of intelligence: Sarcasm increases ...
We are what we spend our time doing. The average adult now spends over twenty hours online each week. Nearly a third of that time is spent on social media platforms, with Facebook taking up fifty minutes of each day. According to the Bureau of Labor Statistics, that's more time than we spend ...

Introduction. Social influence refers to the ways people influence the beliefs, feelings, and behaviors of others. Each day we are bombarded by countless attempts by others to influence us, and as such, the study of social influence has long been a central topic of inquiry for social psychologists and researchers in many other social sciences (e.g., marketing, organizational behavior ...
