Principles Of Digital Transmission With
Data transmission (also data communication or digital communications) is the transfer of data (a digital bitstream or a digitized analog signal) over a point-to-point or point-to-multipoint communication channel. Examples of such channels are copper wires, optical fibers, wireless communication channels, storage media and computer buses. The data are represented as an electromagnetic signal ...

Digital television (DTV) is the transmission of television signals, including the sound channel, using digital encoding, in contrast to the earlier television technology, analog television, in which the video and audio are carried by analog signals. It is an innovative advance that represents the first significant evolution in television technology since color television in the 1950s.

Transmission Line RAPIDESIGNER Operation and Applications Guide

INTRODUCTION

The National Semiconductor Transmission Line RAPIDE-SIGNER makes quick work of calculations frequently used in transmission line design. The RAPIDE-SIGNER is a Windows-based software tool specifically designed to facilitate the design and analysis of transmission lines and related systems.

In addition to the output, ground, and VDD pins found on analog mics, most digital mics also have inputs for a clock and a L/R control. The clock input is used to control the delta-sigma modulator that converts the analog signal from the sensor into a digital PDM signal.
